

MALICIOUS DOCUMENT ANALYSIS CHEAT SHEET

General

Command	Description
<code>trid <file</code>	Identify File Type.
<code>scdbg.exe /f c:\temp\rtf_shellcode.sc</code>	Shellcode Emulation using scdbg.
<code>XORSearch.exe -W c:\temp\rtf_shellcode.sc</code>	Detect shellcode entrypoint using XORSearch.
<code>scdbg.exe /f c:\temp\rtf_shellcode.sc /foff 372</code>	Shellcode Emulation at specific offset e.g. 372.
<code>speakeasy -t c:\temp\rtf_shellcode.sc -r -a x86 -r --raw_offset 372</code>	Shellcode Emulation using speakeasy.
<code>speakeasy -t c:\temp\rtf_shellcode.sc -r -a x86 -r --raw_offset 372</code>	Shellcode Emulation in speakeasy at specific offset e.g. 372.

PDF Document Analysis

Command	Description
<code>python pdfid.py <pdf-file.pdf> -a</code>	Basic summary about PDF Sample.
<code>python pdf-parser.py <pdf-file.pdf></code>	To list all objects and associated entries.

Command	Description
<code>python pdf-parser.py <pdf-file.pdf> --search=<keyword></code>	Search inside PDF objects.
<code>python pdf-parser.py <pdf-file.pdf> -s /URI</code>	Search for /URI in all objects using pdf-parser.py
<code>python pdf-parser.py <pdf-file.pdf> --objstm</code>	Parse the stream object using pdf-parser.
<code>python pdf-parser.py -o <obj_id> -d image.jpeg <pdf-file.pdf></code>	Dump image object obj_id as a JPEG file.
<code>python pdf-parser.py <pdf-file.pdf> -r <obj_id></code>	Check objects referencing target obj_id .

Office Document Analysis

Command	Description
<code>python olemeta.py <office-document></code>	Get standard properties present in the OLE file.
<code>python oletimes.py <office-document></code>	Extract creation and modification times of all streams and storages in the OLE file.
<code>python oleid.py <office-document></code>	Summary related to the sample including suspicious keywords.
<code>python olevba.py <office-document></code>	Extract and analyze the VBA source code
<code>python oleobj.py <office-document></code>	Extract the external relationship details directly

RTF Document Analysis

Command	Description
<code>python rtfdump.py <RTF-document></code>	Dump the contents of RTF document level-wise.
<code>python rtfdump.py <RTF-document> --select 4 --hexdecode more</code>	Display object 4 in hex-format.
<code>python rtfdump.py <RTF-document> --select 4 --hexdecode --dump > c:\temp\rtf_shellcode.sc</code>	Dump object 4 containing shellcode.
